FACILITIES MANAGEMENT

Schools make significant investments in a vast collection of property, buildings, and assets. From multi-function performance spaces, specialised classrooms, sport facilities to modern energy efficient air-conditioning, solar energy, and water management. But too often those responsible for ongoing asset and facility management don't have the support or systems they need.

AssetWhere FM is the cloud based facilities management solution designed for schools. Consolidate all your building plans, grounds and services information in one map-based interface.

AssetWhere FM brings together all your data from different sources into one single source of truth, powering your planning and on-going maintenance operations. Use AssetWhere FM to manage contractors around the campus with the Check-in app. Induction,

certification and site access is managed online ensuring all visitors are compliant with your school's protocols.

AssetWhere FM provides your school with the Asset Life Cycle from conception of a building (capital works project) to the end of life with a full audit trail. It includes all the individual assets within a building and also within individual rooms.

This complete audit trail of transactions against each asset enables you to manage your asset portfolio and make decisions based on facts, not assumptions.

Efficiency through visibility with cloud based facilities management.

AssetWhere FM is configurable to suit organisations of all sizes and is mobile friendly with apps for tablets and smart phones.

With AssetWhere FM, contractors can receive new work requests via the app, inclusive of asset history and work instructions all in one place.

AssetWhere FM is powered by myBuildings - the world leading facilities management software from Core Vision.

AssetWhere FM comes with a suite of modules that lets you manage:

- Work requests
- Reactive maintenance
- Planned preventative maintenance
- Contractors including Induction management and Site attendance tracking
- Mobile checklists for safety inspections
- Flexible reporting dashboards and analytics
