

Next Generation Student Information Platform

Zunia, one platform for all your school data

With the pressure on schools juggling multiple systems and recording extensive amounts of data it can be hard to always see a clear picture of each student when you need it the most.

Having multiple sources for student information, such as excel spreadsheets or paper files, makes it difficult to centralise data and keep up-to-date student records that are consistent and accurate, so that school leaders can make data driven decisions.

It's essential for schools to be able to communicate with parents effectively with real time messaging about medical incidents, school attendance, wellbeing and much more.

Zunia, the next generation cloud native student information system, helps schools centralise records acting as a single source of truth for your school. Imagine having all student data points in one place.

Give your school a holistic view of its performance, improve two-way parent communication, accurately track attendance, keep up to date student records, monitor student wellbeing and manage complex family relationships. Zunia is the relational database that sits at the heart of your school.

One platform at the heart of your school

Tired of adapting to software? Zunia gives you real choice in how you capture data, and how you use it – driving everything from rigid compliance to flexible academic reporting

Easy to choose, learn and use

We've taken 40 years' experience with schools to make the complex simple in Zunia – intuitive setup, interface and navigation make it easy for your whole school to move to Zunia

Future Proof

Zunia was built from scratch in the cloud. Our underlying microservices architecture makes growing and integrating Zunia a dream – making Zunia the right choice for today and tomorrow

Zunia on AWS

Education Horizons has partnered with Amazon Web Services (AWS) to host the next generation student information system, Zunia.

By utilising the cloud-based infrastructure of AWS, Zunia allows users access to the system from anywhere, at any time and on any device. With updates happening in real time, teachers, students and parents can stay up to date with the latest information and resources.

Being hosted on AWS, Zunia benefits from the highest security standards that AWS provides. Schools can rest assured that their data and information are well protected, allowing them to focus on providing high quality education without worrying about security risks.

Meeting your schools needs

School Operations

- Student admissions and lifecycle with one user ID
- Timetabling
- Capture and manage complex relationships

Finance for Schools

- Managing complex fees, billing, debtor management and receipting
- General ledger integration to Xero, MYOB & Quickbooks
- Online payment options with Stripe and Fat Zebra

Reporting Done in Clicks

- Configure academic reports, compliance reports and set up templates
- Visual dashboards and workflows to manage reports
- Measure student performance with longitudinal data

Attendance, Learning and Wellbeing

- Minute by minute attendance reports
- Capture wellbeing observations and medical incidents to flag for follow up
- Automated Google Classroom and Teams rostering

Two-way Parent Communications

- Direct messaging via email and App, so parents are kept up to date
- Visibility on attendance and emergency info, forms and event consent and student timetables

Open Platform

- Build your own ecosystem quickly and easily via our Wonde integration or via our open APIs
- AWS Partner - Hosted on the AWS platform

Challenges

Astra Academy faced the challenge of setting up a new school from scratch. As a new school they decided to set up from the outset by implementing a fit-for-purpose Student Information System (SIS) rather than using spreadsheets.

Solution

The school implemented Education Horizons' Zunia student information system to establish its foundations and provide for sustainable growth. Zunia offers one platform that manages all student data in one place, so the school has a single source of truth to provide accurate, up-to-date data.

Results

The teachers are happy to be using Zunia to mark class attendance. They have found that it's easy to manage a single student or group of students quickly and saves valuable admin time compared to using spreadsheets at their previous schools.

// Zunia is great because it's simple to use and growing, with new features being rolled out all the time."

DAVID WAKEFIELD, HEAD OF SCHOOL,
ASTRA ACADEMY INTERNATIONAL SCHOOL, BANGKOK, THAILAND

Challenges

Since its establishment, Pelangi School relied on Excel spreadsheets and computer programmes to manage student data and attendance. This caused issues with a growing team not being able to access data in a central location.

Solution

Pelangi School decided to invest in the school's future by partnering with Education Horizons and selected Zunia, next-generation student information platform. Zunia gives schools complete control over their data and enables effective parent communication through real-time messaging systems.

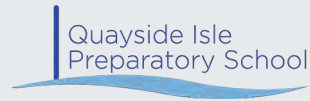

Results

Pelangi School has been able to centralise its administrative processes to make them more efficient and effective. They are also now able to share information between teachers and staff members quickly and easily, making daily operations much smoother.

// After years of working across spreadsheets and a variety of programs to manage things like student data and attendance, we now have the answer in Zunia. We have been able to centralise our school administrative processes."

MELANIE HAMMOND, DIRECTOR, PELANGI SCHOOL, BALI
