

SEQTA Hosting

Ensure your school's information is safe, secure and accessible when you need it. Education Horizons utilises Amazon Web Services (AWS) to meet your school's SEQTA hosting needs.

How does SEQTA Hosting support your school?

High uptime to keep your school running

Traditional on-premises hosting depends largely on your school's physical server environment, meaning if your local instance goes offline, so does SEQTA. AWS is a leading cloud-hosting solution with high up-time and scalability built in, allowing the infrastructure to grow and shrink to meet your personal web traffic needs.

A system that mitigates risk

Are you hosting locally? If so, how comfortable are you with the physical state of your server environment? With AWS, your site is isolated from any physical issues including hardware failure or system overload. AWS data centres are designed to anticipate and manage failure while maintaining service levels, with automated processes that move traffic away from affected areas.

Shield your school from disaster

Don't find yourself in a situation where your school's information is lost or stolen. AWS utilises regular back up protocols to ensure disaster recovery is much easier than it would otherwise be.

SEQTA Hosting is available in two configurations

Single Server

Schools hosting their SEQTA instances on a Single Server will have exclusive access to the resources of that server. Hosting on a Single Server will deliver the best hosting experience. Single Server hosting is required for schools wishing to utilise SEQTA Analyse.

Shared server

Schools can opt to host their data alongside other schools on a Shared Server to reduce costs. Shared server schools will still enjoy the same levels of hosting access and data transfer; however, speeds may be impacted when one or more schools on the server are performing resource-intensive work such as reporting.

SEQTA Hosting costs are charged as a flat monthly fee, based on the number of students and the server type selected. Contact us for more information about SEQTA Hosting or to arrange a quote for your school.
